

Have you ever recycled a urinal screen?

Neither have we.

eco
choice®

Good for the
environment
even if you
don't recycle it.

Why is it important for a urinal screen to biodegrade?

- ◆ We have never heard of a urinal screen being recycled...they all end up in a landfill
- ◆ Traditional urinal screens will last over one-hundred years in a landfill
- ◆ The average urinal screen weighs over 50 grams (ours average 57 grams) – this is MORE than the average quart bottle weighs (ours average 48 grams)
- ◆ Urinal screens are disposed of much more frequently than most other janitorial items...typically monthly

Next time you or your employees dispose of a urinal screen, remember you had a choice...an **eco** **choice**®.

eco **choice**® is the industry's only biodegradable urinal screen! It allows you to do something good for the environment without having to change your daily operations. Maybe the best part about **eco** **choice**® is that it is Eco-Nomical™. **eco** **choice**® urinal screens cost no more than our traditional urinal screens. After all, going green shouldn't put you in the red.

Why wouldn't you do this?
